Impact Factor: 4.022

About this journal

Objective
Reviews on Environmental Health is an international peer-reviewed journal that aims to fill the need for publication of review articles on hot topics in the field of environmental health. It is intended to be an inspiring forum for scientists, environmentalists, physicians, engineers, and students who are concerned with aspects of human health, including quality of life, that are determined by physiological and psychosociological interactions between humans and physical, chemical, biological, and social factors in the environment. *Reviews on Environmental Health* is an important niche not served by any other journal, namely, a place to publish thoughtful reviews on a variety of topics related to both health and the environment. One challenge is to link the research on environmental causes of disease to the clinical practice of medicine. *Reviews on Environmental Health* is a source of integrated information on environmental health topics that will be of value to the broad scientific community, whether students, junior and senior professionals, or clinicians.

Topics

- Environmental toxicology
- Neurotoxicology
- Immunology
- Oncology
- Dermatology
- Epidemiology
- Molecular biology
- Pharmacogenetics
- Child health
- Medicine, occupational health and risk assessment
- Water, air, and soil quality control
- Methods for biomonitoring and remediation
